PROFESSIONAL SUMMARY

Full-stack enthusiast with hands-on experience across network infrastructure, offensive security, and web development, backed by real project work from IoT sensor systems to enterprise-grade network setups. Comfortable moving between highly technical work and explaining it clearly to people who aren't technical, a skill sharpened through several years of teaching and mentoring at Gadjah Mada University. Detail oriented, adaptable, and driven by a genuine interest in how systems work and how to explain them well to others.

WORK EXPERIENCE

Laboratory TA – Computer Network Practicum

Feb 2025 – Jun 2025

Dept. Teknik Elektro & Informatika, Universitas Gadjah Mada • Yogyakarta

- Guided 20+ undergraduate students through hands-on MikroTik configuration labs, covering routing, switching, VLAN segmentation, NAT, and firewall implementation that closely mirrored real enterprise network setups.
- Diagnosed and resolved live router misconfigurations during sessions, including routing loops, VLAN mismatches, and NAT/firewall conflicts, so labs could keep running smoothly without losing momentum.
- Kept the lab environment productive by staying ahead of student questions and issues, which meant a lot of quick thinking and patience when things didn't go as planned.

Penetration Tester Intern

Sep 2024 – Feb 2025

PT Spentera • South Jakarta

- Carried out offensive security assessments on 35+ web applications and Windows/Linux infrastructure, following PTES and OWASP methodologies from reconnaissance through post-exploitation.
- Enumerated attack surfaces using Nmap, Nessus, and manual fingerprinting, then exploited vulnerabilities such as SQL Injection, XSS, IDOR, and authentication bypass with Burp Suite, Metasploit, and custom scripts.
- Ran Active Directory attack chains involving credential harvesting, Kerberoasting, and lateral movement mapping, and identified privilege escalation paths on both Windows and Linux systems.
- Chained multiple vulnerabilities into full attack paths and validated them through proof-of-concept development, mapped against the MITRE ATT&CK framework.

IT Management (Study Program Assistant) Part-time

Apr 2023 – Mar 2024

Internet Engineering Technology Study Program, Universitas Gadjah Mada • Yogyakarta

- Processed and organized more than 1,000 RKKPS documents with zero data loss, catching duplicates and inconsistencies before they became bigger problems.
- Managed the program's website and social media, producing 40+ pieces of content while keeping the brand consistent and professional.
- Supported coordination across a multi lecturer, international program with 50+ participants, which required staying on top of a lot of moving parts at once.

Web Developer Intern

Aug 2023 – Feb 2024

PT D&W Internasional • Cirebon

- Built and maintained front end layouts, improving navigation and making sure everything worked well across mobile and desktop.
- Improved page load performance through image compression, caching, and lazy loading for heavier content.
- Handled hosting and deployment through cPanel, including domain and subdomain setup and versioned releases.
- Worked closely with the marketing team on campaign landing pages, reviewing structure for Google Ads compatibility and giving technical input to help improve Quality Score and conversions.

Laboratory TA – Computer Practice

Sep 2023 – Dec 2023

Dept. Foreign Languages, Arts, & Culture Management, Gadjah Mada University

- Helped run practicum sessions based on lecturer prepared materials, making sure the flow and organization were solid ahead of mid-terms.
- Guided students through document creation exercises in Word, Excel, and PowerPoint, explaining steps clearly for an audience that wasn't technical.
- Coordinated with lecturers and students on attendance and session logistics, keeping the learning environment organized.

EDUCATION

**Applied Bachelor's – Internet Engineering Technology
(Computer Network and Telecommunication)**

GPA: 3.69 / 4.00

Universitas Gadjah Mada, Yogyakarta

Relevant coursework: Computer Networking (MikroTik, Cisco Packet Tracer, GNS3), Network Infrastructure and Design, Server Technology, Hardware Setup.

PROJECT EXPERIENCE

Real-time Network Monitoring System (Final Project) • *Universitas Gadjah Mada*

Project: github.com/indah0503/network-stability-and-performance-monitoring-system

- Architected and deployed an end-to-end IoT network monitoring system on Linux (Nginx + MySQL + PHP), integrating real-time ESP32 sensor data across 5 locations and multiple access points to support NOC-style performance monitoring and alert workflows.
- Designed time-series SQL schemas powering a live anomaly detection dashboard, validating detection accuracy against real-world network behavior, including consistent evening throughput improvements as campus load decreased.
- Delivered the full system within a 3-month timeline achieving an A- grade, with complete technical documentation covering architecture, data flow, integration design, and operational procedures.

CERTIFICATION AND TRAINING

- **MTCNA – MikroTik Certified Network Associate** | *MikroTik*
- **AWS Certified Cloud Practitioner** | *Amazon Web Services*
- **Linux System Administration** | *Adinusa* – Covering user/group management, package management, firewall, network configuration, system monitoring, kernel tuning, and production infrastructure troubleshooting.
- **AWS re/Start Cloud Computing** | *AWS & Orbit Future Academy* – AWS services (VPC, S3, RDS, EC2, IAM, CloudWatch, CloudFront) hands-on practices.

TECHNICAL SKILLS

- **Systems & Infrastructure:** Linux, Windows Server, MikroTik, VLAN, NAT, Firewall, AWS, Docker
- **Backend & Data:** Python, PHP, MySQL, ETL Pipelines, REST APIs, IoT (ESP32)
- **Web Development:** HTML, CSS, JavaScript, PHP, Responsive Design, cPanel
- **Security:** Penetration Testing (PTES/OWASP), Nmap, Burp Suite, Metasploit, Vulnerability Assessment
- **Tools:** Git, Microsoft Office, Technical Documentation
